TEOSManage

SONY

Complete Control

## Creating intelligent workspaces

KEY FEATURES

- Total control over devices, content and playout schedules

- Easy operation with no special skills required

- Compatible with IP display devices from any manufacturer*

- Deploy on-premises or in the cloud**

- Scalable and cost-effective

Efficiently managing, scheduling and monitoring the content that's displayed on all your networked screens, projectors and display devices can be a challenge for any organisation.

TEOS Manage streamlines the control and maintenance of all your connected devices and content in boardrooms, meeting rooms, offices, public areas and other locations.

Monitor the operational status of all networked displays, projectors and other devices via a friendly dashboard-style interface. Group devices by location for easier management. Schedule content playout, and even create your own impressive digital signage in minutes. Integrate screens to your centralised bookings system to display meeting schedules in each room. Rapidly pinpoint issues with any device that isn't working.

With TEOS Manage, you're in complete control of all your devices and content – all the time.

Manage all your networked displays
Enjoy a dashboard-style global overview, summarising devices, rooms and locations, activity status, green management settings and any device issues.

Scheduled playout
Push images, pictures, videos, signage and other content to individual devices, zones or across the whole network. It's easy to manage and review playout schedules, ensuring that the right content is always displayed on the right screen at the right time.

Group devices by location
With TEOS Manage, users can control, monitor and update displays grouping them by building, floor or area via the IP network. Adding more devices is easy with the network auto-discover function.

Integrated room bookings
TEOS Manage integrates smoothly with your room bookings system. Calendar information from Microsoft Office 365, Microsoft Exchange Server or Google Calendar that's relevant to each room can be displayed, with a choice of attractive templates.

Receive device alerts
See operating status of all connected display devices, and receive alerts when any networked device stops working.

Wide device compatibility
TEOS Manage is compatible with virtually any IP-enabled device – including display screens, projectors and tablets – from Sony as well as other manufacturers.

Easily create digital signage
Create colourful, eye-catching signage and distribute instantly across networked screens. Easily combine text, images, graphics, video, news feeds, social media and web content using friendly templates, previewing the results before publication.

Send emergency alerts
Help to manage emergency events by pushing urgent alert notifications to all connected displays – like instructions on finding the closest fire exit to vacate the building.

Green management settings
Schedule on and off times for each display to save energy when devices aren't required, for example at evenings or weekends.

### Cloud or on-site local deployment
Cloud-based deployment** allows for exceptional flexibility, enabling users to easily access TEOS Manage whenever and wherever. Alternatively, local deployment can be used for enhanced levels of security.

Complete device management solution
TEOS Manage can be controlled and maintained by just one person, reducing the need for extra staff and other resource, and allowing just one point of contact for all support. However, if required each functionality can be entrusted to additional users through the configuration admin rights.

*On-demand
**Cloud availability Autumn 2017
